ASK DR. ZIERING**IS HAIR LOSS COMMON IN WOMEN?**

In the US alone, there are 40 million women who suffer from hair loss. It's extremely common. About 50 percent of the inquiries we get in our practice are from women. These ladies need to know that they are not alone, and that there is no reason for them to suffer in silence. Professional and compassionate help is available. The keys for effectively treating female hair loss are a proper diagnosis by a hair loss expert, early intervention and proper education of all the non-surgical and surgical female hair-loss solutions.

WHAT ARE THE CAUSES OF FEMALE HAIR LOSS?

Female hair loss and thinning is primarily due to genetics, but there are other causes such as hormonal changes, trauma and traction, sudden changes in diet, medical conditions such as thyroid problems, general anesthesia and stress. Some studies suggest that a majority of premenopausal women and a greater number of postmenopausal women will experience some degree of diffuse hair thinning as part of the natural aging process. As a result, their hair loss is very gradual and often cyclical. A medical exam, scalp biopsy and blood lab work may be required for the proper diagnosis of female hair loss.

Treating female hair loss

Most women are surprised to learn that they are candidates for hair transplantation. With the dawn of microscopic follicular unit grafting, more women are choosing to treat their hair loss with surgical hair restoration. Like their male counterparts, women must understand that hair loss is a progressive disease, and they likely will continue to lose their native hair. With their hair loss, women often express a profound loss of self. Dr. Ziering takes a holistic approach, encouraging his female patients to proactively manage their hair health by eating diets rich in protein and green leafy vegetables, by drinking lots of water, utilizing FDA-approved and noninvasive laser therapy, and by taking important natural supplements like Viviscal Professional and medical therapy when indicated. The Ziering team is dedicated to the highest standards in female hair-loss solutions, achieving beautiful results for women while creating a positive experience in our medical centers.

**FEMALE HAIRLINE RESTORATION**

At 15 months post op, this 51-year-old patient represents a typical female hairline restoration. She has had one surgical procedure with 2,925 follicular unit grafts transplanted into her hairline. Unlike men, who often begin to see their transplanted hair growing in between four and six months, women's results often are not complete until 10 to 15 months post op.

**EYEBROW RESTORATION**

Whether the result of years of excessive plucking, tattooing or natural hair loss, eyebrow hair can be restored to its prior fullness. This 27-year-old patient had 708 long-hair follicular units transplanted (367 right eyebrow, 341 left eyebrow) during one procedure to restore her overplucked eyebrows. She is seven days post op. This is a very popular procedure.

“you don't notice hair loss until half of your hair is gone”

A DISTINGUISHED LEADER ON THE FOREFRONT OF HAIR RESTORATION SURGERY, DR. CRAIG L. ZIERING WAS CHOSEN AS THE FIRST-EVER SURGEON TO PERFORM A HAIR TRANSPLANT ON *EXTREME MAKEOVER*. HAVING PERFORMED MORE THAN 16,000 SURGERIES, BOASTING MORE THAN 20 YEARS OF EXPERIENCE AND EARNING A WORLDWIDE MALE AND FEMALE PATIENT FOLLOWING, DR. ZIERING OFFERS A HOST OF SURGICAL AND NONINVASIVE TREATMENTS.

ABOUT DR. ZIERING**WHAT IS YOUR FAVORITE PART OF YOUR JOB?**

I really enjoy seeing patients' frustration and despair turn to happiness and self-confidence.

WHAT ALTERNATIVE OCCUPATION WOULD YOU CHOOSE?

I'd like to be a sculptor.

WHAT FRAMED PHOTOS DO YOU HAVE ON YOUR DESK?

I have pictures of previous patients and my family.

WHAT FASCINATES YOU MOST ABOUT THE HUMAN BODY?

It's fascinating how framing the face with hair makes someone appear 10 years younger.
